

Who's There?

The new STORM AXS-COM Intercom for Access Control is a secure, self-contained two-way voice communication system. From a secure location a receptionist can talk to visitors awaiting access through a locked door. This allows the caller's identity and nature of business to be checked before allowing entry to a secure area. The receptionist can unlock the door by pressing a remote lock-release switch incorporated in the receptionist's handset. The AXS-COM can be used as a "stand-alone" system; alternatively it can be used in conjunction with STORM AXS Access Control Keypads.

AXS-COM is available in two versions, one providing communication between a caller and a single internal station (receptionist); the other providing communication between a caller and up to four internal stations (e.g. Reception, Goods-in, Trade Desk, Security, etc.). Each AXS-COM is supplied complete with one receptionist's handset. Additional handsets are available from your chosen AXS-COM supplier.

The AXS-COM is a versatile device allowing use with suitable DC or AC powered systems. It is compatible with most electrically operated strikes and locks without the need for external rectifiers.

Storm Interface is a trading name of Keymat Technology Ltd.
